On the other hand, the Hor+ scaling assumes that the VFOV is fixed, whereas HFOV and AR change according to the current screen resolution.. Originally, the game uses a variant of the 'Anamorphic widescreen' method through which the vertical and horizontal FOV (Field Of View) are respectively fixed to 70 and ~55 degrees, while the AR (Aspect Ratio) is stuck to either 4:3 or 16:10 when the 'Widescreen' option is enabled under the 'Display Setup' menu.
